Supplementary Information

Stereoselective Total Synthesis of the Potent Anti-Asthmatic Compound CMI-977 (LDP-977)

Luiz Carlos Dias,* Lui Strambi Farina and Marco Antonio Barbosa Ferreira

Chemistry Institute, University of Campinas (UNICAMP), CP 6154, 13083-970 Campinas-SP, Brazil

Experimental

Unless noted, all reactions were carried out under an atmosphere of argon in flame-dried glassware with magnetic stirring. Dichloromethane (CH₂Cl₂) and triethylamine (Et₃N) were distilled from CaH₂. Dimethyl sulfoxide (DMSO) was distilled under reduced pressure from CaH₂ and stored over molecular sieves. Tetrahydrofuran (THF) and diethylether (Et₂O) were distilled from Na/benzophenone. Purification of reaction products was carried out by flash column chromatography using silica gel (230-400 mesh). Analytical thin layer chromatography was performed on silica gel 60 and GF (5-40 μm thickness) plates. Visualization was accomplished with UV light and phosphomolybdic acid followed by heating. Optical rotations were measured on a Carl Zeiss LEP A2 with a sodium lamp and are reported as follows: [α]D in c g per 100 mL, solvent. 1H and proton-decoupled 13C NMR (nuclear magnetic resonance) spectra were recorded in a Bruker spectrometer in DMSO or CDCl₃ at 250 MHz (1H) and 62.9 MHz (13C) or at 500 MHz (1H) and 125 MHz (13C). The chemical shifts (δ) are reported in ppm using solvent as an internal standard (CDCl₃ at 7.26 ppm). Data are reported as: s = singlet, d = doublet, t = triplet, q = quartet, quint = quintuplet, sext = sextet, br = broad singlet, dd = doublet of doubles, dt = doublet of triplets, ddd = doublet of doublet of doubles, tt = triplet of triplets, m = multiplet; coupling constant(s) in Hz; integration.

High-resolution mass spectrometry (HRMS) was recorded on a Waters Xevo Q-TOF using electrospray ionization (ESI) or on a GCT Premier Waters using electron ionization (EI). The parent ions ([M + H]+, [M + Na]+ and [M]+) are listed. Infrared spectra (IR) were recorded on a Bomem spectrometer. Wavelengths of maximum absorbance (max) are quoted in wavenumbers (cm⁻¹).

(S)-2,3-Epoxy-1-(4-fluorophenoxy)propane (rac-5)

To the epoxide rac-5 (14.5 g; 86.3 mmol) in t-BuOMe (30 mL), it was added (R,R)-(salen)Co III(OAc)₁ (19) (300 mg, 0.453 mmol), and the mixture was stirred at 0 °C. Distilled water (0.91 mL, 49.6 mmol) was added dropwise over 1 h and the resulting mixture was stirred for 5 h at room temperature. The mixture was concentrated under reduced pressure and the residue was purified by flash column chromatography using a mixture of hexane/EtOAc (50:50) as eluent, providing 4.5 g (97%) of rac-5 as a colorless oil; 1H NMR (CDCl₃, 250 MHz) δ 2.74 (dd, 1H, J 2.5 and 4.9 Hz), 2.85 (t, 1H, J 4.5 Hz), 3.30-3.36 (m, 1H), 3.90 (dd, 1H, J 5.7 and 11.1 Hz, 4.20 (dd, 1H, J 3.0 and 11.1 Hz, 6.8-7.2 (m, 2H); 13C NMR (CDCl₃, 62.9 MHz) δ 44.5 (CH₂), 50.1 (CH), 69.4 (CH₂), 115.6 (CH), 115.8 (CH), 116.0 (CH), 154.6 (C₀), 155.6 (C₀), 159.4 (C₀); IR (film) νmax/cm⁻¹ 3481, 3059, 3005, 2928, 2878, 2056, 1863, 1601, 1506, 1456, 1294, 1250, 1211, 1099, 1036, 916, 864, 829, 775, 750, 723.

(S)-1-(4-Fluorophenoxy)hex-5-en-2-ol (15)

To a solution of allylmagnesium bromide (18) (17.8 mL, 17.8 mmol, 1 mol L⁻¹ in Et₂O), CuCN (22 mg, 0.25 mmol) was added and the solution was cooled to 0 °C. Then, a solution of (S)-5 (1.50 g, 8.92 mmol) in Et₂O (18.3 mL)
was added dropwise. The mixture was stirred for 30 min at 0 ºC, quenched with a saturated aqueous solution of 
NH₄Cl (5 mL) and stirred for 30 min at room temperature. 
The mixture was then filtered and the precipitate rinsed 
with Et₂O. The organic layer was dried over anhydrous 
Na₂SO₄ and concentrated under reduced pressure. The 
residue was purified by flash column chromatography 
using a mixture of hexane/Et₂O (60:40) as eluent, providing 
the homopropargylic alcohol 15 (1.88 g, 8.92 mmol) as 
a colorless oil in a quantitative yield; [α]D20 +20 (c 1.5, 
CHCl₃), [α]D −16.5 (c 1.5, CHCl₃); 1H NMR (CDCl₃, 
250 MHz) δ 1.61-1.76 (m, 2H), 2.11-2.33 (m, 2H), 2.41 
(d, 1H, J 2.5 Hz), 3.76-4.10 (m, 2H), 4.98-5.11 (m, 2H), 
5.76-5.93 (m, 1H), 6.80-6.99 (m, 2H); 13C NMR (CDCl₃, 
62.9 MHz) δ 29.6 (CH₃), 32.2 (CH₂), 69.5 (CH), 72.8 (CH₂), 
115.1 (CH), 115.5 (CH), 115.7 (CH), 116.0 (CH), 138.0 
(CH), 154.7 (C₀), 155.5 (C₀), 159.3 (C₀).
